Background:	This gene encodes the major component of the vault complex. Vaults are multi-subunit
	ribonucleoprotein structures that may be involved in nucleo-cytoplasmic transport. The
	encoded protein may play a role in multiple cellular processes by regulating the MAP kinase,

	JAK/STAT and phosphoinositide 3-kinase/Akt signaling pathways. The encoded protein also
	plays a role in multidrug resistance, and expression of this gene may be a prognostic marker for
	several types of cancer. Alternatively spliced transcript variants have been observed for this
	gene.
