Target Details

Target:	MED31
Alternative Name:	Med31 (MED31 Products)
Background:	Component of the Mediator complex, a coactivator involved in the regulated transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge to convey information from gene-specific regulatory proteins to the basal RNA polymerase II transcription machinery. Mediator is recruited to promoters by direct interactions with regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation complex with RNA

Target Details

	polymerase II and the general transcription factors. [UniProtKB/Swiss-Prot Function]
