MPST Protein (Transcript Variant 2) (Myc-DYKDDDDK Tag)

Image

Overview
0

20 µg Quantity:

Target: **MPST**

Protein Characteristics: Transcript Variant 2

Origin: Human

HEK-293 Cells Source:

Protein Type: Recombinant

Purification tag / Conjugate: This MPST protein is labelled with Myc-DYKDDDDK Tag.

Application: Antibody Production (AbP), Standard (STD)

Product Details

Characteristics: · Recombinant human MPST (transcript variant 2) protein expressed in HEK293 cells.

· Produced with end-sequenced ORF clone

Purity: > 80 % as determined by SDS-PAGE and Coomassie blue staining

Target Details

MPST Target: Alternative Name: Mpst (MPST Products) Background: This protein encoded by this gene catalyzes the transfer of a sulfur ion from 3mercaptopyruvate to cyanide or other thiol compounds. It may be involved in cysteine degradation and cyanide detoxification. There is confusion in literature between this protein (mercaptopyruvate sulfurtransferase, MPST), which appears to be cytoplasmic, and thiosulfate

Target Details

sulfurtransferase (rhodanese, TST, GeneID:7263), which is a mitochondrial protein. Deficiency	
in MPST activity has been implicated in a rare inheritable disorder known as mercaptolactate-	
cysteine disulfiduria (MCDU). Alternatively spliced transcript variants encoding same or	
different isoforms have been identified for this gene.	

Molecular Weight: 33 kDa

NCBI Accession: NP_001013454

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.

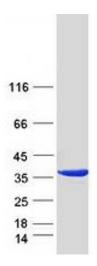

For Research Use only

Handling

Restrictions:

Concentration:	50 μg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended.
