Datasheet for ABIN2726378
MRPS16 Protein（Myc－DYKDDDDK Tag）
1 Image

## Overview

| Quantity： | $20 \mu \mathrm{~g}$ |
| :--- | :--- |
| Target： | MRPS16 |
| Origin： | Human |
| Source： | HEK－293 Cells |
| Protein Type： | Recombinant |
| Purification tag／Conjugate： | This MRPS16 protein is labelled with Myc－DYKDDDDK Tag． |
| Application： | Antibody Production（AbP），Standard（STD） |

Product Details

Characteristics：
－Recombinant human MRPS16 protein expressed in HEK293 cells．
－Produced with end－sequenced ORF clone

Purity：$\quad>80 \%$ as determined by SDS－PAGE and Coomassie blue staining

Target Details

| Target： | MRPS16 |
| :--- | :--- |
| Alternative Name： | Mrps16（MRPS16 Products） |
| Background： | Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein |
|  | synthesis within the mitochondrion．Mitochondrial ribosomes（mitoribosomes）consist of a |
|  | small 28S subunit and a large 39S subunit．They have an estimated $75 \%$ protein to rRNA |
|  | composition compared to prokaryotic ribosomes，where this ratio is reversed．Another |
|  | difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter |

## Target Details

|  | contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. This gene encodes a 28 S subunit protein that belongs to the ribosomal protein S16P family. The encoded protein is one of the most highly conserved ribosomal proteins between mammalian and yeast mitochondria. Three pseudogenes (located at 8q21.3, $20 q 13.32,22 q 12-q 13.1$ ) for this gene have been described. |
| :---: | :---: |
| Molecular Weight: | 15.2 kDa |
| NCBI Accession: | NP_057149 |
| Application Details |  |
| Application Notes: | Recombinant human proteins can be used for: <br> Native antigens for optimized antibody production <br> Positive controls in ELISA and other antibody assays |
| Comment: | The tag is located at the C-terminal. |
| Restrictions: | For Research Use only |
| Handling |  |
| Concentration: | $50 \mu \mathrm{~g} / \mathrm{mL}$ |
| Buffer: | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 \% glycerol. |
| Storage: | $-80^{\circ} \mathrm{C}$ |
| Storage Comment: | Store at $-80^{\circ} \mathrm{C}$. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended. |
