## Target Details

Target:	MYH3
Alternative Name:	Myosin-3 ( <a href="#">MYH3 Products</a> )
Background:	<p>Myosin is a major contractile protein which converts chemical energy into mechanical energy through the hydrolysis of ATP. Myosin is a hexameric protein composed of a pair of myosin heavy chains (MYH) and two pairs of nonidentical light chains. This gene is a member of the MYH family and encodes a protein with an IQ domain and a myosin head-like domain.</p> <p>Mutations in this gene have been associated with two congenital contracture (arthrogryposis)</p>
