Background:	This protein is part of a large family of nuclear receptor transcription factors involved in
	signaling pathways. Nuclear receptors have been shown to regulate pathways involved in
	embryonic development, as well as in maintenance of proper cell function in adults. Members
	of this family are characterized by discrete domains that function in DNA and ligand binding.

	This gene encodes a retinal nuclear receptor that is a ligand-dependent transcription factor.
	Defects in this gene are a cause of enhanced S cone syndrome. Alternatively spliced transcript
	variants encoding different isoforms have been identified.
Molecular Weight:	39.5 kDa
NCBI Accession:	NP_057430
Pathways:	Nuclear Receptor Transcription Pathway, Steroid Hormone Mediated Signaling Pathway
