Target Details

Target:	ODC1
Alternative Name:	Ornithine Decarboxylase (ODC1 Products)
Background:	This gene encodes the rate-limiting enzyme of the polyamine biosynthesis pathway which catalyzes ornithine to putrescine. The activity level for the enzyme varies in response to growth-promoting stimuli and exhibits a high turnover rate in comparison to other mammalian proteins. Originally localized to both chromosomes 2 and 7, the gene encoding this enzyme has been determined to be located on 2p25, with a pseudogene located on 7q31-qter. Multiple

Target Details

	alternatively spliced transcript variants encoding distinct isoforms have been identified.
