Background:	This gene is a member of the paired box (PAX) family of transcription factors. Members of this
	gene family typically contain a paired box domain, an octapeptide, and a paired-type
	homeodomain. These genes play critical roles during fetal development and cancer growth.
	Mice lacking this gene exhibit impaired development of organs, musculature and the skeleton,
	including absent and abnormally developed teeth, and neonatal lethality. Mutations in the
