Target Details

Target:	Protocadherin 8 (PCDH8)
Alternative Name:	Pcdh8 (PCDH8 Products)
Background:	<p>This gene belongs to the protocadherin gene family, a subfamily of the cadherin superfamily.</p> <p>The gene encodes an integral membrane protein that is thought to function in cell adhesion in a CNS-specific manner. Unlike classical cadherins, which are generally encoded by 15-17 exons, this gene includes only 3 exons. Notable is the large first exon encoding the extracellular region,</p>

Target Details

	including 6 cadherin domains and a transmembrane region. Alternative splicing yields isoforms with unique cytoplasmic tails.
Molecular Weight:	109.9 kDa
NCBI Accession:	NP_002581
