larget.	FEA19
Alternative Name:	Peroxin 19,pex19 (PEX19 Products)
Background:	This gene is necessary for early peroxisomal biogenesis. It acts both as a cytosolic chaperone
	and as an import receptor for peroxisomal membrane proteins (PMPs). Peroxins (PEXs) are
	proteins that are essential for the assembly of functional peroxisomes. The peroxisome

## Target Details

	biogenesis disorders (PBDs) are a group of genetically heterogeneous autosomal recessive,
	lethal diseases characterized by multiple defects in peroxisome function. These disorders have
	at least 14 complementation groups, with more than one phenotype being observed for some
	complementation groups. Although the clinical features of PBD patients vary, cells from all PBD
	patients exhibit a defect in the import of one or more classes of peroxisomal matrix proteins
	into the organelle. Defects in this gene are a cause of Zellweger syndrome (ZWS), as well as
	peroxisome biogenesis disorder complementation group 14 (PBD-CG14), which is also known
	as PBD-CGJ. Alternative splicing results in multiple transcript variants.
