Datasheet for ABIN2729011 PIKFYVE Protein (Transcript Variant 3) (Myc-DYKDDDDK Tag)

Overview

Image

000000000	
Quantity:	20 µg
Target:	PIKFYVE
Protein Characteristics:	Transcript Variant 3
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PIKFYVE protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	 Recombinant human PIP5K3 (transcript variant 3) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	PIKFYVE
Alternative Name:	Pip5k3 (PIKFYVE Products)
Background:	Phosphorylated derivatives of phosphatidylinositol (PtdIns) regulate cytoskeletal functions, membrane trafficking, and receptor signaling by recruiting protein complexes to cell- and endosomal-membranes. Humans have multiple PtdIns proteins that differ by the degree and

position of phosphorylation of the inositol ring. This gene encodes an enzyme (PIKfyve also

	known as phosphatidylinositol-3-phosphate 5-kinase type III or PIPKIII) that phosphorylates the
	D-5 position in PtdIns and phosphatidylinositol-3-phosphate (PtdIns3P) to make PtdIns5P and
	PtdIns(3,5)biphosphate. The D-5 position also can be phosphorylated by type I PtdIns4P-5-
	kinases (PIP5Ks) that are encoded by distinct genes and preferentially phosphorylate D-4
	phosphorylated PtdIns. In contrast, PIKfyve preferentially phosphorylates D-3 phosphorylated
	PtdIns. In addition to being a lipid kinase, PIKfyve also has protein kinase activity. PIKfyve
	regulates endomembrane homeostasis and plays a role in the biogenesis of endosome carrier
	vesicles from early endosomes. Mutations in this gene cause corneal fleck dystrophy (CFD) an
	autosomal dominant disorder characterized by numerous small white flecks present in all
	layers of the corneal stroma. Histologically, these flecks appear to be keratocytes distended
	with lipid and mucopolysaccharide filled intracytoplasmic vacuoles. Alternative splicing results
	in multiple transcript variants encoding distinct isoforms.[provided by RefSeq, May 2010].
Molecular Weight:	50 kDa
NCBI Accession:	NP_689884
Pathways:	Inositol Metabolic Process

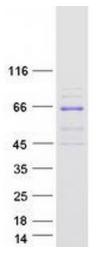

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only

Handling

Concentration:	50 µg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze
	immediately. Only 2-3 freeze thaw cycles are recommended.
