Target Details

Target:	PKIB
Alternative Name:	Pkib (PKIB Products)
Background:	<p>This gene encodes a member of the cAMP-dependent protein kinase inhibitor family. The encoded protein may play a role in the protein kinase A (PKA) pathway by interacting with the catalytic subunit of PKA, and overexpression of this gene may play a role in prostate cancer.</p> <p>Alternatively spliced transcript variants encoding multiple isoforms have been observed for this</p>
