Target Details	
Target:	PLS1
Alternative Name:	Plastin 1,pls1 (PLS1 Products)
Background:	Plastins are a family of actin-binding proteins that are conserved throughout eukaryote

evolution and expressed in most tissues of higher eukaryotes. In humans, two ubiquitous

plastin isoforms (L and T) have been identified. The protein encoded by this gene is a third

distinct plastin isoform, which is specifically expressed at high levels in the small intestine.	
Alternatively spliced transcript variants varying in the 5' UTR, but encoding the same protein,	
have been found for this gene. A pseudogene of this gene is found on chromosome	
11.[provided by RefSeq, Feb 2010].
