Target Details	
Target:	PRC1
Alternative Name:	Prc1 (PRC1 Products)
Background:	This gene encodes a protein that is involved in cytokinesis. The protein is present at high levels
	during the S and G2/M phases of mitosis but its levels drop dramatically when the cell exits
	mitosis and enters the G1 phase. It is located in the nucleus during interphase, becomes
	associated with mitotic spindles in a highly dynamic manner during mitosis, and localizes to the

	cell mid-body during cytokinesis. This protein has been shown to be a substrate of several
	cyclin-dependent kinases (CDKs). It is necessary for polarizing parallel microtubules and
	concentrating the factors responsible for contractile ring assembly. Alternative splicing results
	in multiple transcript variants.
