## Datasheet for ABIN2729576 PRKACA Protein (Transcript Variant 2) (Myc-DYKDDDDK Tag)

Overview

Image

000101000	
Quantity:	20 µg
Target:	PRKACA
Protein Characteristics:	Transcript Variant 2
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PRKACA protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	<ul> <li>Recombinant human PRKACA (transcript variant 2) protein expressed in HEK293 cells.</li> <li>Produced with end-sequenced ORF clone</li> </ul>
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	PRKACA
Alternative Name:	Prkaca (PRKACA Products)
Background:	This gene encodes one of the catalytic subunits of protein kinase A, which exists as a tetrameric holoenzyme with two regulatory subunits and two catalytic subunits, in its inactive form. cAMP causes the dissociation of the inactive holoenzyme into a dimer of regulatory

subunits bound to four cAMP and two free monomeric catalytic subunits. Four different

	regulatory subunits and three catalytic subunits have been identified in humans. cAMP-
	dependent phosphorylation of proteins by protein kinase A is important to many cellular
	processes, including differentiation, proliferation, and apoptosis. Constitutive activation of this
	gene caused either by somatic mutations, or genomic duplications of regions that include this
	gene, have been associated with hyperplasias and adenomas of the adrenal cortex and are
	linked to corticotropin-independent Cushing&aposs syndrome. Alternative splicing results in
	multiple transcript variants encoding different isoforms. Tissue-specific isoforms that differ at
	the N-terminus have been described, and these isoforms may differ in the post-translational
	modifications that occur at the N-terminus of some isoforms.
Molecular Weight:	39.6 kDa
Molecular Weight: NCBI Accession:	39.6 kDa NP_997401
NCBI Accession:	NP_997401
NCBI Accession:	NP_997401 NF-kappaB Signaling, Hedgehog Signaling, EGFR Signaling Pathway, Neurotrophin Signaling

## Application Details

Application Notes:	Recombinant human proteins can be used for: Native antigens for optimized antibody production Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only
Handling	
Concentration:	50 μg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended.
