Datasheet for ABIN2729630
PKC zeta Protein (Transcript Variant 2) (Myc-DYKDDDDK Tag)
1 Image

## Overview

| Quantity: | $20 \mu \mathrm{~g}$ |
| :--- | :--- |
| Target: | PKC zeta (PRKCZ) |
| Protein Characteristics: | Transcript Variant 2 |
| Origin: | Human |
| Source: | HEK-293 Cells |
| Protein Type: | Recombinant |
| Purification tag / Conjugate: | This PKC zeta protein is labelled with Myc-DYKDDDDK Tag. |
| Application: | Antibody Production (AbP), Standard (STD) |

Product Details

Characteristics:

- Recombinant human PRKCZ (transcript variant 2) protein expressed in HEK293 cells.
- Produced with end-sequenced ORF clone

Purity: $\quad>80 \%$ as determined by SDS-PAGE and Coomassie blue staining

Target Details

| Target: | PKC zeta (PRKCZ) |
| :--- | :--- |
| Alternative Name: | Prkcz (PRKCZ Products) |
| Background: | Protein kinase C (PKC) zeta is a member of the PKC family of serine/threonine kinases which |
|  | are involved in a variety of cellular processes such as proliferation, differentiation and secretion. |
|  | Unlike the classical PKC isoenzymes which are calcium-dependent, PKC zeta exhibits a kinase <br> activity which is independent of calcium and diacylglycerol but not of phosphatidylserine. |

## Target Details

|  | Furthermore, it is insensitive to typical PKC inhibitors and cannot be activated by phorbol ester. <br> Unlike the classical PKC isoenzymes, it has only a single zinc finger module. These structural <br> and biochemical properties indicate that the zeta subspecies is related to, but distinct from <br> other isoenzymes of PKC. Alternative splicing results in multiple transcript variants encoding <br> different isoforms. |
| :--- | :--- |
| Molecular Weight: | 46.4 kDa |
| NCBI Accession: | NP_001028753 |
| Pathways: | NF-kappaB Signaling, RTK Signaling, Myometrial Relaxation and Contraction, Regulation of |
| Leukocyte Mediated Immunity, Positive Regulation of Immune Effector Process, Synaptic |  |
| Membrane, Production of Molecular Mediator of Immune Response, CXCR4-mediated |  |
| Signaling Events, Thromboxane A2 Receptor Signaling |  |

## Application Details

| Application Notes: | Recombinant human proteins can be used for: <br>  <br>  <br>  <br> Native antigens for optimized antibody production <br> Positive controls in ELISA and other antibody assays |
| :--- | :--- |
| Comment: | The tag is located at the C-terminal. |
| Restrictions: | For Research Use only |
| Handling | $50 \mu \mathrm{~g} / \mathrm{mL}$ |
| Concentration: | 25 mM Tris. $\mathrm{HCl}, \mathrm{pH} 7.3,100 \mathrm{mM}$ glycine, $10 \%$ glycerol. |
| Buffer: | $-80^{\circ} \mathrm{C}$ | | Store at $-80^{\circ} \mathrm{C}$. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze |
| :--- |
| Storage: |
| Storage Comment: |

## Western Blotting
