## Datasheet for ABIN2730034 PTBP1 Protein (Transcript Variant 2) (Myc-DYKDDDDK Tag)

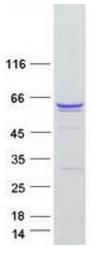

Image

Overview	
Quantity:	20 µg
Target:	PTBP1
Protein Characteristics:	Transcript Variant 2
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PTBP1 protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	<ul> <li>Recombinant human PTBP1 (PTB) (transcript variant 2) protein expressed in HEK293 cells.</li> <li>Produced with end-sequenced ORF clone</li> </ul>
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	PTBP1
Alternative Name:	Ptbp1 (Ptb) (PTBP1 Products)
Background:	This gene belongs to the subfamily of ubiquitously expressed heterogeneous nuclear
	ribonucleoproteins (hnRNPs). The hnRNPs are RNA-binding proteins and they complex with
	heterogeneous nuclear RNA (hnRNA). These proteins are associated with pre-mRNAs in the
	nucleus and appear to influence pre-mRNA processing and other aspects of mRNA metabolism

	and transport. While all of the hnRNPs are present in the nucleus, some seem to shuttle
	between the nucleus and the cytoplasm. The hnRNP proteins have distinct nucleic acid binding
	properties. The protein encoded by this gene has four repeats of quasi-RNA recognition motif
	(RRM) domains that bind RNAs. This protein binds to the intronic polypyrimidine tracts that
	requires pre-mRNA splicing and acts via the protein degradation ubiquitin-proteasome pathway.
	It may also promote the binding of U2 snRNP to pre-mRNAs. This protein is localized in the
	nucleoplasm and it is also detected in the perinucleolar structure. Alternatively spliced
	transcript variants encoding different isoforms have been described.
Molecular Weight:	58.9 kDa
NCBI Accession:	NP_114367
Pathways:	Regulation of Muscle Cell Differentiation
Application Details	
Application Notes:	Recombinant human proteins can be used for:
Application Notes:	Recombinant human proteins can be used for: Native antigens for optimized antibody production
Application Notes:	
Application Notes: Comment:	Native antigens for optimized antibody production
	Native antigens for optimized antibody production Positive controls in ELISA and other antibody assays
Comment:	Native antigens for optimized antibody production Positive controls in ELISA and other antibody assays The tag is located at the C-terminal.
Comment: Restrictions:	Native antigens for optimized antibody production Positive controls in ELISA and other antibody assays The tag is located at the C-terminal.
Comment: Restrictions: Handling	Native antigens for optimized antibody production         Positive controls in ELISA and other antibody assays         The tag is located at the C-terminal.         For Research Use only
Comment: Restrictions: Handling Concentration:	Native antigens for optimized antibody production         Positive controls in ELISA and other antibody assays         The tag is located at the C-terminal.         For Research Use only         50 µg/mL

Western Blotting
