Target Details

Target:	PUM2
Alternative Name:	Pumilio 2, pum2 (PUM2 Products)
Background:	This gene encodes a protein that belongs to a family of RNA-binding proteins. The encoded protein functions as a translational repressor during embryonic development and cell differentiation. This protein is also thought to be a positive regulator of cell proliferation in adipose-derived stem cells. Alternate splicing results in multiple transcript variants.
Molecular Weight:	113.8 kDa
