RBPJ Protein (Transcript Variant 3) (Myc-DYKDDDDK Tag)

Image

Overview	
Quantity:	20 μg

Target:	RBPJ
Protein Characteristics:	Transcript Variant 3
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This RBPJ protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)

Product Details

Characteristics:	 Recombinant human RBP-J kappa / RBPJ (transcript variant 3) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining

Target Details

Target:	RBPJ
Alternative Name:	Rbp-J Kappa,rbpj (RBPJ Products)
Background:	The protein encoded by this gene is a transcriptional regulator important in the Notch signaling pathway. The encoded protein acts as a repressor when not bound to Notch proteins and an
	activator when bound to Notch proteins. It is thought to function by recruiting chromatin

Target Details

	remodeling complexes containing histone deacetylase or histone acetylase proteins to Notch
	signaling pathway genes. Several transcript variants encoding different isoforms have been
	found for this gene, and several pseudogenes of this gene exist on chromosome 9.
Molecular Weight:	54 kDa
NCBI Accession:	NP_976028
Pathways:	Notch Signaling, Stem Cell Maintenance, Smooth Muscle Cell Migration

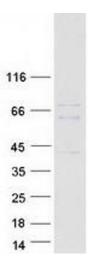

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only

Handling

Concentration:	50 μg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended.
