Target Details	
Target:	RFX2
Alternative Name:	Rfx2 (RFX2 Products)
Background:	This gene is a member of the regulatory factor X gene family, which encodes transcription
	factors that contain a highly-conserved winged helix DNA binding domain. The protein encoded
	by this gene is structurally related to regulatory factors X1, X3, X4, and X5. It is a transcriptional
	activator that can bind DNA as a monomer or as a heterodimer with other RFX family

	members. This protein can bind to cis elements in the promoter of the IL-5 receptor alpha gene.
	Two transcript variants encoding different isoforms have been described for this gene, and
	both variants utilize alternative polyadenylation sites.
