Target Details	
Target:	PTTG1
Alternative Name:	Securin,pttg1 (PTTG1 Products)
Background:	The encoded protein is a homolog of yeast securin proteins, which prevent separins from promoting sister chromatid separation. It is an anaphase-promoting complex (APC) substrate that associates with a separin until activation of the APC. The gene product has transforming activity in vitro and tumorigenic activity in vivo, and the gene is highly expressed in various tumors. The gene product contains 2 PXXP motifs, which are required for its transforming and

	tumorigenic activities, as well as for its stimulation of basic fibroblast growth factor expression. It also contains a destruction box (D box) that is required for its degradation by the APC. The
	acidic C-terminal region of the encoded protein can act as a transactivation domain. The gene
	product is mainly a cytosolic protein, although it partially localizes in the nucleus. Three
	transcript variants encoding the same protein have been found for this gene.
Molecular Weight:	21.8 kDa
NCBI Accession:	NP_004210
Application Details	
Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only
