Background:	This gene encodes a seizure-related protein that is localized on the cell surface. The gene is located in a region of chromosome 16p11.2 that is thought to contain candidate genes for autism spectrum disorders (ASD), though there is no evidence directly implicating this gene in
	ASD. Increased expression of this goes have been found in lung concers, and the protein is

ASD. Increased expression of this gene has been found in lung cancers, and the protein is
