Target Details		
Target:	SDK2	
Alternative Name:	Sidekick Homolog 2 (Chicken) (Sdk2) (SDK2 Products)	
Background:	The protein encoded by this gene is a member of the immunoglobulin superfamily. The protein contains two immunoglobulin domains and thirteen fibronectin type III domains. Fibronectin type III domains are present in both extracellular and intracellular proteins and tandem repeats	

are known to contain binding sites for DNA, heparin and the cell surface. This protein, and a

homologous mouse sequence, are very similar to the Drosophila sidekick gene product but the
specific function of this superfamily member is not yet known. Evidence for alternative splicing
at this gene locus has been observed but the full-length nature of additional variants has not yet
been determined.

Molecular Weight: 239.2 kDa

NCBI Accession: NP\_001138424

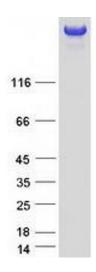

## **Application Details**

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only
