| | organelle biogenesis, protein folding, and proteolysis. The encoded ATPase may be involved in |
|---------------------|---|
| | the assembly or function of nuclear protein complexes. Two transcript variants encoding |
| | distinct isoforms have been identified for this gene. Other alternative splice variants have been |
| | described but their full length sequences have not been determined. Mutations associated with |
| | this gene cause the most frequent form of autosomal dominant spastic paraplegia 4. |
