## Target Details

	organelle biogenesis, protein folding, and proteolysis. The encoded ATPase may be involved in
	the assembly or function of nuclear protein complexes. Two transcript variants encoding
	distinct isoforms have been identified for this gene. Other alternative splice variants have been
	described but their full length sequences have not been determined. Mutations associated with
	this gene cause the most frequent form of autosomal dominant spastic paraplegia 4.
