## Target Details

Target:	STMN2
Alternative Name:	Stathmin-2, stmn2 ( <a href="#">STMN2 Products</a> )
Background:	<p>This gene encodes a member of the stathmin family of phosphoproteins. Stathmin proteins function in microtubule dynamics and signal transduction. The encoded protein plays a regulatory role in neuronal growth and is also thought to be involved in osteogenesis.</p> <p>Reductions in the expression of this gene have been associated with Down's syndrome and Alzheimer's disease. Alternatively spliced transcript variants have been observed for this gene.</p>

## Target Details

A pseudogene of this gene is located on the long arm of chromosome 6.

Molecular Weight: 20.6 kDa

NCBI Accession: [NP\\_008960](#)

## Application Details

Application Notes: Recombinant human proteins can be used for:  
Native antigens for optimized antibody production  
Positive controls in ELISA and other antibody assays

Comment: The tag is located at the C-terminal.
