Background:	The protein encoded by this gene has sequence similarity with members of the WD40 repeat-
	containing protein family. The WD40 group is a large family of proteins, which appear to have a
	regulatory function. It is believed that the WD40 repeats mediate protein-protein interactions

## Target Details

	regulation, vesicular trafficking, cytoskeletal assembly and may play a role in the control of cytotypic differentiation. This encoded protein is found as a subunit in corepressor SMRT (silencing mediator for retinoid and thyroid receptors) complex along with histone deacetylase
	3 protein. This gene is located adjacent to the ocular albinism gene and it is thought to be
	involved in the pathogenesis of the ocular albinism with late-onset sensorineural deafness
	phenotype. Four transcript variants encoding two different isoforms have been found for this
	gene. This gene is highly similar to the Y chromosome TBL1Y gene.
Molecular Weight:	62.3 kDa
NCBI Accession:	NP_005638
Pathways:	Sensory Perception of Sound, Regulation of Lipid Metabolism by PPARalpha
Application Details
