()	V	ρ	rv	16	$\supset I$	Λ

Overview		
Quantity:	20 μg	
Target:	TFIP11	
Protein Characteristics:	Transcript Variant 2	
Origin:	Human	
Source:	HEK-293 Cells	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This TFIP11 protein is labelled with Myc-DYKDDDDK Tag.	
Application:	Antibody Production (AbP), Standard (STD)	
Product Details		
Characteristics:	 Recombinant human TFIP11 (transcript variant 2) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone 	
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining	
Target Details		
Target:	TFIP11	
Alternative Name:	Tfip11 (TFIP11 Products)	
Background:	This gene encodes a protein component of the spliceosome that promotes the release of the	
	lariat-intron during late-stage splicing through the recruitment of a pre-mRNA splicing factor	
	called DEAH-box helicase 15. The encoded protein contains a G-patch domain, a hallmark of	
	RNA-processing proteins, that binds DEAH-box helicase 15. This protein contains an atypical	

Target Details

nuclear localization sequence as well as a nuclear speckle-targeting sequence, enabling it to		
localize to distinct speckled regions within the cell nucleus. Polymorphisms in this gene are		
associated with dental caries suggesting a role in amelogenesis. Alternative splicing results in		
multiple transcript variants.		

Molecular Weight:	96.6 kDa

NCBI Accession: NP_036275

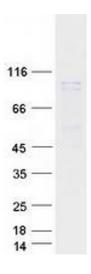

Application Details

Application Notes:	Recombinant human proteins can be used for:	
	Native antigens for optimized antibody production	
	Positive controls in ELISA and other antibody assays	
Comment:	The tag is located at the C-terminal.	
Restrictions:	For Research Use only	

Handling

Concentration:	50 μg/mL	
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.	
Storage:	-80 °C	
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended.
