Target Details	
Target:	TRAF3
Alternative Name:	Traf3,craf1 (TRAF3 Products)
Background:	The protein encoded by this gene is a member of the TNF receptor associated factor (TRAF)
	protein family. TRAF proteins associate with, and mediate the signal transduction from,
	members of the TNF receptor (TNFR) superfamily. This protein participates in the signal

transduction of CD40, a TNFR family member important for the activation of the immune	
response. This protein is found to be a critical component of the lymphotoxin-beta receptor	
(LTbetaR) signaling complex, which induces NF-kappaB activation and cell death initiated by	
LTbeta ligation. Epstein-Barr virus encoded latent infection membrane protein-1 (LMP1) can	
interact with this and several other members of the TRAF family, which may be essential for the	
oncogenic effects of LMP1. Several alternatively spliced transcript variants encoding three	
distinct isoforms have been reported.
