Target Details

Target:	TRMT6
Alternative Name:	Trmt6 (TRMT6 Products)
Background:	This gene encodes a member of the tRNA methyltransferase 6 protein family. A similar protein in yeast is part of a two component methyltransferase, which is involved in the posttranslational modification that produces the modified nucleoside 1-methyladenosine in tRNAs. Modified 1-methyladenosine influences initiator methionine stability and may be involved in the replication of human immunodeficiency virus type 1. Alternative splicing results

Target Details

	in multiple transcript variants.
