## RYK Protein (Transcript Variant 2) (Myc-DYKDDDDK Tag)

Image

| Overview |
|----------|
|          |

| Overview                      |  |
|-------------------------------|--|
| Quantity:                     | 20 μg  |
| Target:                       | RYK  |
| Protein Characteristics:      | Transcript Variant 2   |
| Origin:                       | Human  |
| Source:                       | HEK-293 Cells  |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This RYK protein is labelled with Myc-DYKDDDDK Tag.  |
| Application:                  | Antibody Production (AbP), Standard (STD)  |
| Product Details               |  |
| Characteristics:              | Recombinant human Tyrosine-protein kinase RYK (transcript variant 2) protein expressed in      |
|                               | HEK293 cells.  • Produced with end-sequenced ORF clone   |
| Purity:                       | > 80 % as determined by SDS-PAGE and Coomassie blue staining                                   |
| Target Details                |  |
| Target:                       | RYK  |
| Alternative Name:             | Tyrosine-Protein Kinase Ryk (RYK Products)   |
| Background:                   | The protein encoded by this gene is an atypical member of the family of growth factor receptor |
|                               | protein tyrosine kinases, differing from other members at a number of conserved residues in    |
|                               | the activation and nucleotide binding domains. This gene product belongs to a subfamily        |

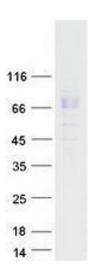

|                   | whose members do not appear to be regulated by phosphorylation in the activation segment. It  |
|-------------------|---|
|                   | has been suggested that mediation of biological activity by recruitment of a signaling-       |
|                   | competent auxiliary protein may occur through an as yet uncharacterized mechanism. The        |
|                   | encoded protein has a leucine-rich extracellular domain with a WIF-type Wnt binding region, a |
|                   | single transmembrane domain, and an intracellular tyrosine kinase domain. This protein is     |
|                   | involved in stimulating Wnt signaling pathways such as the regulation of axon pathfinding.    |
|                   | Alternative splicing results in multiple transcript variants encoding distinct isoforms.      |
| Molecular Weight: | 67.6 kDa  |
| NCBI Accession:   | NP_002949   |
| Pathways:         | RTK Signaling, WNT Signaling, Regulation of Cell Size   |

### **Application Details**

| Application Notes: | Recombinant human proteins can be used for:          |
|--------------------|--|
|                    | Native antigens for optimized antibody production    |
|                    | Positive controls in ELISA and other antibody assays |
| Comment:           | The tag is located at the C-terminal.                |
| Restrictions:      | For Research Use only                                |

### Handling

| Concentration:   | 50 μg/mL  |
|------------------|---|
| Buffer:          | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.  |
| Storage:         | -80 °C  |
| Storage Comment: | Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended. |

### **Western Blotting**
