Target Details	
Target:	UNC119
Alternative Name:	Unc119 (UNC119 Products)
Background:	This gene is specifically expressed in the photoreceptors in the retina. The encoded product
	shares strong homology with the C. elegans unc119 protein and it can functionally complement
	the C. elegans unc119 mutation. It has been localized to the photoreceptor synapses in the
	outer plexiform layer of the retina, and suggested to play a role in the mechanism of

Target Details

	photoreceptor neurotransmitter release through the synaptic vesicle cycle. Two transcript
	variants encoding different isoforms have been described for this gene.
Molecular Weight:	26.8 kDa
NCBI Accession:	NP_005139

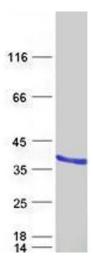

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
