| Background:                   | This gene encodes a protein that sorts transmembrane proteins into lysosomes/vacuoles via  |
|                               | the multivesicular body (MVB) pathway. This protein, along with other soluble coiled-coil  |
|                               | containing proteins, forms part of the ESCRT-III protein complex that binds to the endosomal   |
|                               | membrane and recruits additional cofactors for protein sorting into the MVB. This protein may  |
