Background:	Vesicle mediated protein sorting plays an important role in segregation of intracellular
	molecules into distinct organelles. Genetic studies in yeast have identified more than 40
	vacuolar protein sorting (VPS) genes involved in vesicle transport to vacuoles. This gene
	encodes the human ortholog of yeast Vps41 protein which is also conserved in Drosophila,

	tomato, and Arabidopsis. Expression studies in yeast and human indicate that this protein may
	be involved in the formation and fusion of transport vesicles from the Golgi. Several transcript
	variants encoding different isoforms have been described for this gene, however, the full-length
	nature of not all is known.
