## Target Details

Target:	WTAP
Alternative Name:	Wtap ( <a href="#">WTAP Products</a> )
Background:	The Wilms tumor suppressor gene WT1 appears to play a role in both transcriptional and posttranscriptional regulation of certain cellular genes. This gene encodes a WT1-associating protein, which is a ubiquitously expressed nuclear protein. Like WT1 protein, this protein is localized throughout the nucleoplasm as well as in speckles and partially colocalizes with

## Target Details

	splicing factors. Alternative splicing of this gene results in several transcript variants encoding three different isoforms.
