Target Details	
Target:	ZBED1
Alternative Name:	Zbed1 (ZBED1 Products)
Background:	This gene is located in the pseudoautosomal region 1 (PAR1) of X and Y chromosomes. It was earlier identified as a gene with similarity to Ac transposable elements, however, was found not to have transposase activity. Later studies show that this gene product is localized in the nucleus and functions as a transcription factor. It binds to DNA elements found in the promoter regions of several genes related to cell proliferation, such as histone H1, hence may have a role

Target Details

	in regulating genes related to cell proliferation. Alternatively spliced transcript variants with
	different 5' untranslated region have been found for this gene.
Molecular Weight:	78 kDa
NCBI Accession:	NP_004720

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
