Target Details

Target:	ZP2
Alternative Name:	Zp2,zpa (ZP2 Products)
Background:	The zona pellucida is an extracellular matrix that surrounds the oocyte and early embryo. It is composed of three glycoproteins with various functions during fertilization and preimplantation development. The glycosylated mature peptide is one of the structural components of the zona pellucida and functions in secondary binding and penetration of acrosome-reacted spermatozoa. Female mice lacking this gene do not form a stable zona matrix and are sterile.

Target Details

	Alternative splicing results in multiple transcript variants.
