# Target Details

Target:	FOXR1
Alternative Name:	FOXR1 (FOXR1 Products)
Background:	This gene encodes a member of the forkhead box (FOX) family of transcription factors. FOX

family members are monomeric, helix-turn-helix proteins with a core DNA-binding domain of approximately 110 aa. Many FOX transcription factors play roles in determining cell fates during early development. This forkhead box protein lacks the C-terminal basic region found in many other FOX family members. It is located within the 11q23.3 region which is commonly deleted in neuroblastomas.
