Target Details

Target:	HNRNPUL1	
Alternative Name:	HNRPUL1 (HNRNPUL1 Products)	
Background:	HNRPUL1 is a nuclear RNA-binding protein of the heterogeneous nuclear ribonucleoprotein	
	(hnRNP) family. This protein binds specifically to adenovirus E1B-55 kDa oncoprotein. It may	
	play an important role in nucleocytoplasmic RNA transport, and its function is modulated by	
	E1B-55 kDa in adenovirus-infected cells. This gene encodes a nuclear RNA-binding protein of	
	the heterogeneous nuclear ribonucleoprotein (hnRNP) family. This protein binds specifically to	
	adenovirus E1B-55 kDa oncoprotein. It may play an important role in nucleocytoplasmic RNA	
	transport, and its function is modulated by E1B-55 kDa in adenovirus-infected cells. Four	
	transcript variants encoding different isoforms have been found for this gene. Another variant	
	has also been found, but its full-length nature has not been determined.
