## Target Details

Alternative Name:	WDR35 ( <a href="#">WDR35 Products</a> )
Background:	<p>This gene encodes a member of the WD repeat protein family. WD repeats are minimally conserved regions of approximately 40 amino acids typically bracketed by gly-his and trp-aspartate (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Members of this family are involved in a variety of cellular processes, including cell cycle progression, signal transduction, apoptosis, and gene regulation. Multiple alternatively spliced transcript variants encoding distinct isoforms have been found for this gene, but the biological validity of some variants has not been determined.</p> <p>Alias Symbols: KIAA1336, MGC33196, CED2</p> <p>Protein Interaction Partner: CUL3, UBC, ALYREF, BCL6,</p> <p>Protein Size: 1170</p>
