	complex 1). Components of this complex are involved in the biogenesis of organelles such as
	melanosomes and platelet-dense granules. A mouse model for Hermansky-Pudlak Syndrome is
	mutated in the murine version of this gene. Alternative splicing results in multiple transcript
	variants. Read-through transcription exists between this gene and the upstream EEF1E1
	(eukaryotic translation elongation factor 1 epsilon 1) gene, as well as with the downstream
	TXNDC5 (thioredoxin domain containing 5) gene.
