	composed of a heterodimer of alpha and beta tubulins. The genes encoding these microtubule
	constituents belong to the tubulin superfamily, which is composed of six distinct families.
	Genes from the alpha, beta and gamma tubulin families are found in all eukaryotes. The alpha
	and beta tubulins represent the major components of microtubules, while gamma tubulin plays
	a critical role in the nucleation of microtubule assembly. There are multiple alpha and beta
	tubulin genes, which are highly conserved among species. This gene encodes alpha tubulin and
	is highly similar to mouse and rat Tuba1 gene.
