Target Details				
Alternative Name:	OR2AG1 (OR2AG1 Products)			
Background:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response			
	that triggers the perception of a smell. The olfactory receptor proteins are members of a large			
	family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory			
	receptors share a 7-transmembrane domain structure with many neurotransmitter and			
	hormone receptors and are responsible for the recognition and G protein-mediated			
	transduction of odorant signals. The olfactory receptor gene family is the largest in the			
	genome. The nomenclature assigned to the olfactory receptor genes and proteins for this			
	organism is independent of other organisms.
