## Target Details

| Background:         | This gene is a member of the MAGEC gene family. The members of this family are not<br>expressed in normal tissues, except for testis, and are expressed in tumors of various<br>histological types. The MAGEC genes are clustered on chromosome Xq26-q27. Two transcript<br>variants encoding distinct isoforms have been found for this gene.<br>Protein Size: 643 |
