Target Details

Background:	OR5V1 is a olfactory receptors interact with odorant molecules in the nose, to initiate a	
	neuronal response that triggers the perception of a smell. The olfactory receptor proteins are	
	members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-	
	exon genes. Olfactory receptors share a 7-transmembrane domain structure with many	
	neurotransmitter and hormone receptors and are responsible for the recognition and G protein-	
	mediated transduction of odorant signals. The olfactory receptor gene family is the largest in	
	the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this	
	organism is independent of other organisms.
