Target Details		
Alternative Name:	OR51A7 (OR51A7 Products)	
Background:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response	
	that triggers the perception of a smell. The olfactory receptor proteins are members of a large	
	family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory	
	receptors share a 7-transmembrane domain structure with many neurotransmitter and	
	hormone receptors and are responsible for the recognition and G protein-mediated	
	transduction of odorant signals. The olfactory receptor gene family is the largest in the	
	genome. The nomenclature assigned to the olfactory receptor genes and proteins for this	
	organism is independent of other organisms.
