	Background: This gene encodes a member of the microtubule affinity-regulating kinase family.		
	These protein kinases phosphorylate microtubule-associated proteins and regulate the		
	transition between stable and dynamic microtubules. The encoded protein is associated with		
	the centrosome throughout mitosis and may be involved in cell cycle control. Expression of this		
	gene is a potential marker for cancer, and the encoded protein may also play a role in		
	Alzheimer's disease. Pseudogenes of this gene are located on both the short and long arm of		
	chromosome 3. Alternatively spliced transcript variants encoding multiple isoforms have been		
	observed for this gene. [provided by RefSeq, Dec 2010].
