Background:	Synonyms: MTLC, Myc target protein 1, Myc target in myeloid cells protein 1, MYCT1, MTMC1	
	Background: May regulate certain MYC target genes, MYC seems to be a direct upstream	
	transcriptional activator. Does not seem to significantly affect growth cell capacity.	
	Overexpression seems to mediate many of the known phenotypic features associated with	
	MYC, including promotion of apoptosis, alteration of morphology, enhancement of anchorage-	
	independent growth, tumorigenic conversion, promotion of genomic instability, and inhibition of	
	hematopoietic differentiation (By similarity).
