Target Details

Background: Synonyms: chondrosarcoma associated protein 2, CSA2, Cytokine IK, IK cytokine down regulator of HLA II, IK factor, IK Gene, prer protein, Protein RER, RD element, RED protein, RER, RED_HUMAN.

Background: The function of RED is currently unknown. The protein encoded by the RED gene was identified by its RED repeat, a stretch of repeated arginine, glutamic acid and aspartic acid residues. The protein localizes to discrete dots within the nucleus, excluding the nucleolus. This gene maps to chromosome 5, however, a pseudogene may exist on chromosome 2.

Pathways: [Negative Regulation of Hormone Secretion](#), [Regulation of Lipid Metabolism by PPARalpha](#)
