Target Details

serotonin transporter, 5HT transporter, Solute carrier family 6 member 4, SLC6A4

Background: Serotonin transporter whose primary function in the central nervous system involves the regulation of serotonergic signaling via transport of serotonin molecules from the synaptic cleft back into the pre-synaptic terminal for re-utilization. Plays a key role in mediating regulation of the availability of serotonin to other receptors of serotonergic systems.

Terminates the action of serotonin and recycles it in a sodium-dependent manner.
